

## AI Empowerment Program for SHG Ecosystems

### *Democratizing Intelligence and Capability for SHGs in India*

---

#### 1. THE CORE IDEA

There are many SHG support and empowerment programs across India covering sales channels, packaging, and marketing basics. But it still operates in a traditional human-effort model: teach a woman how to photograph her product, she does it manually. We teach her to track sales, she writes in a register. What Wasabi AI does differently is it **embeds AI as a working partner** into every step of that journey — not as a technology lesson, but as a daily-use tool that multiplies her output without multiplying her effort.

India's SHG ecosystem is one of the world's largest women-led economic movements. Yet SHG women compete daily, not just with local sellers but with organized brands, D2C startups, e-commerce platforms, and AI-assisted businesses. The gap between them is not one of quality or effort. It is a gap in infrastructure: access to intelligence, communication, design, and decision-making support.

***Wasabi AI is closing that gap.***

This program trains SHG women and their ecosystem leaders to use AI as a daily business partner — for product development, branding, marketing, sales, pricing, and planning. It uses no proprietary software and introduces no new platform. Every tool taught — ChatGPT, Google AI, WhatsApp, voice assistants — is free, already on their phones, and available in regional languages today.

**The result:** A woman who once needed an agency for branding, a consultant for pricing, and a designer for packaging can now access all of that through a voice conversation on her phone.

#### 2. WHO THIS IS FOR

| Track                                            | Who They Are                                                                                     | Their Role After Training                                                                        |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Track A — EFC Leaders (Cluster & District level) | District & cluster-level women facilitators who support SHGs in business, grants, market linkage | AI Enterprise Enablers — local champions who use AI strategically and cascade capability to SHGs |
| Track B — SHG Women                              | Producers, artisans, food processors, sellers, home entrepreneurs                                | AI-confident micro-entrepreneurs who use voice AI daily for business decisions                   |

### 3. THE TRANSFORMATION JOURNEY

Both tracks follow a deliberate progression, not a single event, but a phased capability-building journey with implementation gaps built in, so women practice in the real world between sessions and return with experience, not just memory. The program is built on a simple belief:

***“AI is not replacing women. AI is strengthening women.”***

The objective is not technology training. It is:

- stronger decision-making,
- greater confidence,
- better market competitiveness,
- and improved enterprise capability.

The learning journey is intentionally designed to move participants through:

**Curiosity → Confidence → Application → Enterprise Transformation**

#### 3.1 TRACK A: EFC TRAINING PROGRAM

| Level              | Focus Area                               | Duration & Structure    |
|--------------------|------------------------------------------|-------------------------|
| Level 1            | AI Foundations & Confidence              | 2-Day Intensive         |
| Practice Gap       | Real-world experimentation               | 2–3 Weeks               |
| Level 2 – Phase 1  | Product, Branding & Market Understanding | 2 Days                  |
| Implementation Gap | Applied usage                            | 2–3 Weeks               |
| Level 2 – Phase 2  | Sales, Marketing & Business Systems      | 2 Days                  |
| Advanced Gap       | Deep implementation                      | ~3 Months               |
| Level 3            | Enterprise Intelligence & Leadership     | 2-Day Advanced Workshop |

#### **Level 1 — AI Foundations & Digital Confidence (2-Day Workshop)**

The first transformation is psychological, not technical.

- What AI is — explained through stories, analogies, and live demonstrations
- Text AI, Voice AI, Image AI, Translation AI — introduced through play and exploration
- Regional language voice interaction — speaking naturally, getting real answers
- Hands-on activities: generate a product story, create a festival message, ask AI a business question
- Breaking the belief: *“Technology is not for me”*
- Responsible AI use: verifying outputs, privacy basics, safe digital behavior

***After Level 1: 2–3 week practice period. Participants use AI independently before returning.***

#### **Level 2 — AI Across the SHG Business Lifecycle (2 × 2-Day Workshops)**

Covers the complete journey of an SHG enterprise, from idea to market, with AI embedded at every step.

| Module                         | What AI Does Here                                                              |
|--------------------------------|--------------------------------------------------------------------------------|
| Business Ideation              | Identify market gaps, trending products, seasonal demand                       |
| Product Positioning & USP      | Define what makes the product special; develop value proposition               |
| Branding & Storytelling        | Brand name, tagline, product story, SHG identity                               |
| Packaging Intelligence         | Label content, eco-friendly concepts, festival packaging                       |
| Sales & Customer Communication | Scripts, objection handling, B2B pitching, upselling                           |
| Marketing & Promotion          | WhatsApp campaigns, catalog creation, photography guidance                     |
| Pricing & Profitability        | Cost calculation, margin analysis, SKU strategy                                |
| Market Research                | Competitor understanding, consumer trends, market gaps                         |
| Understanding Customer         | Defining ICPs and understanding what they want and how to communicate to them. |
| Prompt Handbook                | Use-case-specific prompts, voice prompts, regional language workflows          |

**Deliverable:** Every participant receives *The AI Enterprise Companion Handbook* — a ready-to-use reference with prompts for every business situation they will encounter.

**After Level 2:** 2–3 week implementation gap between phase 1&2.

### Level 3 — Advanced Intelligence & Ecosystem Leadership (2-Day Workshop, ~3 months after Level 2)

For senior EFC leaders ready to operate at ecosystem scale.

- AI for data interpretation — reading sales patterns, demand shifts, product performance
- Ecosystem planning — cluster-level opportunity mapping, procurement coordination
- Business diagnostics — understanding why products fail, customers don't repeat, pricing is off
- Report generation, impact documentation, proposal drafting
- AI workflow sequencing — building repeatable, consistent processes (*no coding involved*)
- Leadership training: becoming the AI mentor and facilitator for their SHG cluster

### 3.2 TRACK B: SHG WOMEN TRAINING PROGRAM

| Level              | Focus Area                                | Duration & Structure       |
|--------------------|-------------------------------------------|----------------------------|
| Level 1            | Confidence & AI Familiarity               | 1-Day Interactive Workshop |
| Practice Gap       | Exploration & usage                       | 2–3 Weeks                  |
| Level 2            | Product, Business Application & Marketing | 2 Days                     |
| Implementation Gap | Real business usage                       | ~3 Months                  |
| Level 3            | Advanced Entrepreneurship Track           | Selected Women Only        |

*Voice-first. Regional language. Outcome-oriented. Low-literacy accessible.*

#### Level 1 — Hello AI: Building Confidence (1 Day)

- AI explained through relatable stories and live demonstrations — not definitions
- Every woman speaks to AI in her own language on her own phone
- Personal questions first — then business questions
- AI for everyday life
- AI for communication
- Confidence building through technology
- Role plays, games, group exploration — joyful and non-threatening
- Key psychological shift: *"If I can speak, I can use AI"*

**Takeaway:** A Voice Prompt Card in the regional language — five ready-to-use voice prompts for everyday business situations.

#### Level 2 — AI in My Business (2 Day)

| Module                 | What Women Learn to Do                                                         |
|------------------------|--------------------------------------------------------------------------------|
| Product Ideas          | Ask AI what sells, what customers want, what to make this season               |
| Product Promotion      | Create WhatsApp messages, festival offers, product descriptions                |
| Packaging & Branding   | Generate product names, label ideas, write their product story                 |
| Sales Conversations    | Handle price objections, pitch to shopkeepers, upsell                          |
| Visual Content         | Photography guidance, poster ideas, catalog support                            |
| Visual Content         | Photography guidance, poster ideas, catalog support                            |
| Customer Relationships | Repeat order messages, festival greetings, feedback requests                   |
| Understanding customer | Defining ICPs and understanding what they want and how to communicate to them. |

**Deliverable:** *The SHG Prompt Handbook* — illustrated, regional language, voice-ready prompts organized by business situation. Designed to be used daily, not stored away.

### **Level 3 — Growth & Digital Entrepreneurship (2 Days, ~3 months after Level 2)**

For high-potential SHG women showing strong adoption and entrepreneurial initiative.

- AI for online selling — catalogue selling, social commerce, marketplace basics
- Business planning — product expansion, market expansion, pricing strategy
- Advanced marketing — festival campaign creation, customer segmentation
- Repeat sales systems and community-led growth
- Growth strategy – automated workflows

**Closes with:** Each woman creating a personal 3-month AI-assisted growth plan for her enterprise, shared with her group.

#### **4. HOW THIS IS DELIVERED**

| Element    | Approach                                                                              |
|------------|---------------------------------------------------------------------------------------|
| Language   | Always in the regional language of participants                                       |
| Technology | Existing free tools: ChatGPT, Google AI, WhatsApp — no new platform                   |
| Devices    | Participants' own Android phones                                                      |
| Literacy   | Voice-first design; accessible to low-literacy participants                           |
| Pedagogy   | Role plays, live demonstrations, peer practice, real product exercises                |
| Continuity | Implementation gaps built in between levels — real-world practice before next session |
| Context    | Rooted in real business situations                                                    |

#### **5. WHAT CHANGES**

| Level                | Individual Woman                                  | Enterprise                                          | Ecosystem                                           |
|----------------------|---------------------------------------------------|-----------------------------------------------------|-----------------------------------------------------|
| <b>Psychological</b> | Breaks the belief that technology is not for her  | Products begin to look and sound professional       | EFC leaders become AI champions for their cluster   |
| <b>Practical</b>     | Uses voice AI for daily business decisions        | Branding, pricing, and marketing improve measurably | Repeatable AI workflows replace ad-hoc support      |
| <b>Strategic</b>     | Competes with confidence against branded products | Revenue, margins, and customer retention grow       | District-level intelligence infrastructure is built |

## 6. BY THE END OF THIS PROGRAM, EVERY WOMAN WILL HAVE BUILT THIS

### SHG Women — What Each Woman Walks Away With

- AI-generated product photographs — ready to share
- A 30–60 second AI-assisted product video
- A WhatsApp product catalog
- A printed packaging design with label and brand story
- A brand name, tagline, and product story — written by her, shaped by AI
- A theme song for her SHG
- A festival promotional poster
- A WhatsApp broadcast message — ready to send
- A pricing and profit calculation for her product
- A 3-month business growth plan
- A personal Prompt Handbook in her regional language

### EFC Leaders — What Each Leader Walks Away With

- Everything in the SHG list, plus:
- A complete brand identity kit for an SHG product — name, tagline, story, label, packaging concept
- A 30-day marketing content calendar
- A B2B pitch document for a retailer or bulk buyer
- A business proposal for their SHG cluster
- An e-commerce product listing — optimized and ready to publish
- A standard operating procedure document for their EFC
- A cluster-level opportunity and gap analysis report

*Every item above is real, usable, and created by the woman herself — with AI as her partner.*

## 7. THE BELIEF BEHIND THIS PROGRAM

A large company has a marketing team, a designer, a pricing analyst, and a sales strategist. An SHG woman has herself and her phone. This program makes her phone as powerful as that team.

Because the future of rural entrepreneurship will not be decided only by access to capital. It will increasingly be decided by: **access to intelligence, execution capability, and confidence.** SHG women are not behind because they lack intelligence or capability. They are behind because they have lacked infrastructure. **AI is that infrastructure. This training is the bridge.**
